Teri Shannon & Cheryl Rossini pose at DAC's Energy Recovery Seminar on Halloween

## ***DID YOU KNOW?***

**Therma-Fuser™ diffuser systems are more energy efficient than VAV box systems by 15%-50%.** Two independent studies have been done: In 1993, a C.A. Pieper study shows energy savings of 35%-50% of Individual Room Control over Multi-Room Control and in 2007, a study completed by Rumsey Engineers confirms energy savings of 15%-47% and quantifies the sources of energy savings for five climate zones. To read about both studies, [click here](#) or e-mail [Teri](mailto:Teri) to request a copy.

**It's a boy!** Congrats to Pat Will and his wife, Carol, on the birth of their son, Chesley, on October 3. Mom, Dad and baby are all doing well.

**DAC's Energy Recovery Seminar a success!** A big THANK YOU to all of you who attended our recent seminars on Oct. 31 and Nov. 1. Your participation and support was key in our success. Here is what some of the attendees had to say:

*"It was one of the best I've been to in years, including many I've paid for" – Jason Chenard, Oak Point Associates*

*"... DAC puts on one of the best technical seminars in all aspects, from technical, organization, staffing, venue, food and atmosphere" – Terri Laurence, Engineered Solutions, Inc.*

*"I enjoyed the seminar...it was quite informative" – David Bowley, UNH*

*"Very good presentation" – Graydon Braley, Northern Peabody*

Our next seminar will be in May 2008. If you would like to be put on the invitation list, or have a suggestion for a topic (we're always open to ideas!), please send an e-mail to [Teri](mailto:Teri).

## ***NEW AND NOTABLE***

**Strobic Air** recently updated their [choosetrystack.com](http://choosetrystack.com) selection program. A major new feature is that you no longer input the number of fans on the selection page. Instead you enter the total CFM and static pressure for your system, and from there the program will select any combination of fans that will work for the given requirements. This allows you to see your total BHP required, as well as relative system cost, so you can select the most cost-effective or energy efficient system.

Log on today to view the many additions to the software and to select your next Strobic Air High Dilution Exhaust System. Call DAC for assistance or if you have any questions!

## ***Lab Crafters Introduces the Air Infinity!!***

**Lab Crafters**, the innovators that introduced High Performance, Low Flow fume hoods to the market, is proud to introduce their latest revolutionary product: the **Air Infinity Ventilated Laboratory Bench (VLB)**. This device offers the operator a safe, ventilated work area that is unencumbered by the traditional enclosure of a fume hood.

Features include:

- Open design
- Cascading scallop baffle
- Induced Airflow
- Horizontal service post

The VLB requires less energy than a conventional fume hood, and it passes the ASHRAE 110 test!

The VLB will be available for full distribution in **January of 2008**. To learn more, contact DAC today!
